This is a simple example, this will show different font sizes and also DIFFERENT FONT STYLES.

In this example the huge font size is set and the Foot note size also. There's a fairly large set of font sizes.

In this example command and switches are used. `A command is used to change the style of a sentence`
A switch changes the style from this point to the end of the document unless other switch is used

Part of this text is written *in different font style* to highlight it.
